1. Executive Summary & Progress Update

Current Update: All critical technical foundation flaws identified in the initial crawl have been **100% RESOLVED** in the Next.js codebase. The canonical tags no longer point to the chatgpt.site staging domain; all pages have self-referencing production URLs under https://www.sealwellpackaging.com/. Open Graph and Twitter card images now point to the production domain. The XML sitemap and robots.txt have been generated and locked to production. High-volume LCP images have been prioritized, and below-the-fold images have been lazy-loaded.

Remaining Actions: Content-level items (unifying experience claims between 35+ years and 1995, uploading authentic ISO/GMP certificate documents, expanding dedicated sub-pages for rubber stoppers and aluminium seals, and publishing approved FAQ blocks) are placed in a **Pending-Approval Report** so that visual and editorial integrity is strictly maintained until client review.
